

Poster Guidance

Size: A0

1. Name of the country
2. Characteristics of breast cancer care in the country:
 - Which model of organising breast cancer services is predominant in your country? (Model 1: all services from screening to palliative care are provided in one comprehensive organisation; Model 2 screening is organised independently from diagnosis, treatment and palliative care; Model 3 screening is organised independent of diagnosis and treatment, which is independent to palliative care; see also scope, chapter 3)
 - Who is responsible for certification and performance measurement: the service (hospital) itself?, local, regional, central authorities?

3. Screening:

Current situation:

- Population based screening in place?
- Current QA- measures in place for screening (mandatory?, voluntary?)

Implementing European QA scheme:

- How would European QA scheme fit in?
- What needs to be considered before and at implementation of European QA scheme?

4. Treatment and Diagnoses

Current situation:

- Current QA- measures in place for treatment and diagnosis (mandatory? voluntary?)

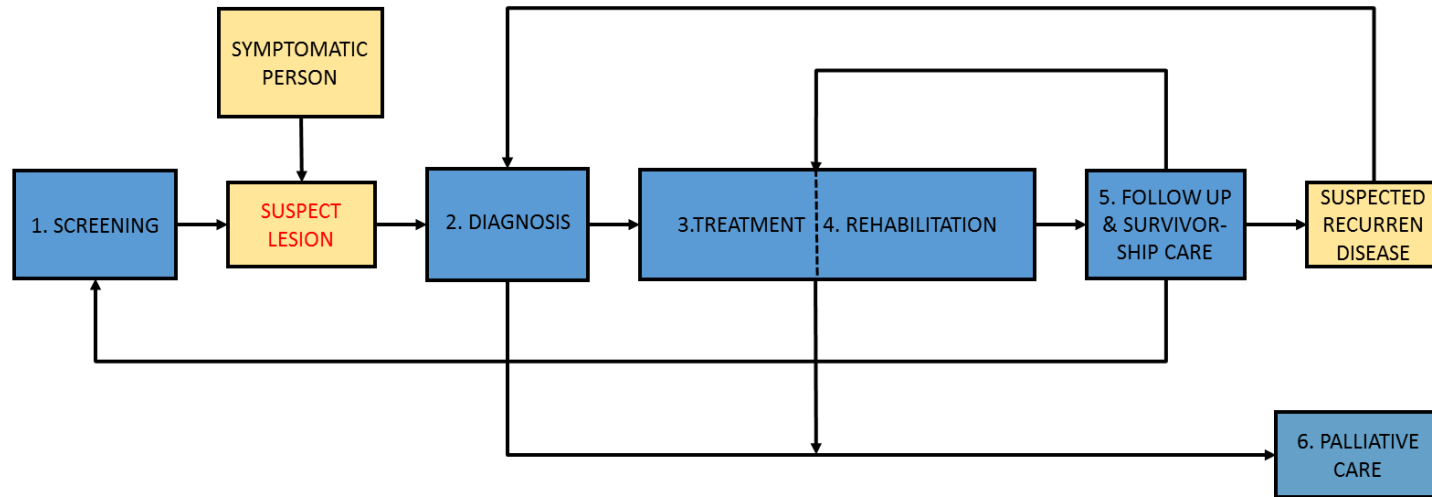

Implementing European QA scheme:

- How would European QA scheme fit in?
- What needs to be considered before and at implementation of European QA scheme?

5. Conclusion

6. In addition

You may also wish to indicate where at the patient care pathway (see figure), you would expect the greatest benefit from the European QA scheme or the grates obstacles to it.

CARE PATHWAY
